

Dear Professor Fei Dai,

My name is Saliha Dil, and as a junior web developer with experience in using AI programs, I am interested in the Astronomy Summer Research Position.

Although I do not have a university degree in an astronomy-related field, my knowledge in AI and my web development experience lead me to believe that I can contribute to your work on TESS photometry. Additionally, I have gained experience in identifying exoplanet transits within TESS data by participating in the Intro to Astronomy Research workshop.

I would be interested in learning more about the research opportunities in this area. If you are in search of summer interns, I would be delighted if you could consider my application.

Sincerely,

Saliha Dil
